

Eligibility List 2021

The Global Fund's 2017-2022 strategy and allocation-based approach enables strategic investment to accelerate the end of HIV/AIDS, tuberculosis and malaria and build resilient and sustainable systems for health. Allocations are made once every three years following the outcomes of the Global Fund's replenishment. The Global Fund 2020 Eligibility List identified which country components (HIV/AIDS, tuberculosis or malaria) were eligible to receive an allocation for the 2020-2022 period. Please note that eligibility does not guarantee an allocation.

The list set forth below reflects the eligibility determinations for the year 2021 (a non-allocation year) and is for information purposes only. If a country has no eligible components, it does not appear on the list. The 2023 Eligibility List will determine which country components are eligible for an allocation for the 2023-2025 allocation period.

The Global Fund's Eligibility Policy¹, revised in May 2018, is designed to ensure that available resources are allocated to, and invested in, countries and regions with the highest disease burden, the least economic capacity, and where key and vulnerable populations are disproportionately affected by the three diseases. Eligibility is determined by a country's income classification² and disease burden³. All low and lower-middle income countries are eligible, regardless of disease burden. Upper-middle income countries must have at least a 'high' burden of disease⁴ to be eligible for Global Fund financing⁵.

A multi-country application is only eligible for funding where the majority (at least 51 percent) of countries included in the application would be eligible to submit their own request for funding for that same disease through a single-country application.

Please refer to the notes that follow the list for additional information. Please direct questions about the list to: accesstofunding@theglobalfund.org.

⑤ The Global Fund ⑥ Le Fonds mondial ⑤ El Fondo Mundial ⑤ Глобальный фонд ⑤ 全球基金 الصندوق العالمي

¹ Global Fund Eligibility Policy, as set forth in Annex 1 to GF/B39/O2 (the 'Eligibility Policy') and approved by the Board in May 2018 under decision point GF/B39/DP03.

² The Global Fund uses an average of available GNI per capita data (World Bank Atlas Method) over the latest three-year period to determine a country's income classification. Please see Notes for more information on how averages are calculated. Data for this Eligibility List were extracted from the World Bank website on 26 October 2020.

³ The latest available disease burden data is provided by headquarters of UNAIDS for HIV and WHO for tuberculosis and malaria.

⁴ Paragraph 8a of the Eligibility Policy defines the disease burden criteria and thresholds for upper-middle income eligibility.

⁵ Exceptions apply. See paragraphs 8b, 9a, and 9b of the Eligibility Policy for more information.

Notes to changes in eligibility status

- ^a Algeria is newly classified as a Lower-Middle Income country based on the latest three-year average of GNI per capita data (Atlas method), resulting in one determination of eligibility for HIV funding.
- ^bThe indicated country component was eligible for a final allocation of Transition Funding in the 2020-2022 allocation period.
- ^c El Salvador was determined to be malaria-free, attaining 3 consecutive years of zero indigenous cases. El Salvador's malaria component is no longer eligible. Since the component did not receive an allocation in 2020-2022, it will not be eligible for Transition Funding in the 2023-2025 allocation cycle.
- ^d Fiji's HIV and TB components are now classified as eligible in the 2021 Eligibility List after meeting eligibility criteria for two consecutive eligibility determinations, noting that eligibility does not guarantee an allocation.
- ^e Jordan's TB disease burden classification changed from "High" in 2020 to "Not High" in the 2021 Eligibility List. As a result, the TB component is eligible for Transition Funding for the 2023-2025 allocation cycle.
- f Libya's TB disease burden classification changed from "Not High" in 2020 to "High" in the 2021 Eligibility List, resulting in one determination of eligibility. Country components must be eligible for two consecutive eligibility determinations to be classified as eligible on the Eligibility List.
- ^g Since Romania is not on the OECD DAC list of ODA recipients, Romania may be eligible for an allocation for HIV for non-governmental or civil society organizations under Paragraph 9b of the Eligibility Policy only if they have demonstrated barriers to providing funding for interventions for key populations, as supported by the country's epidemiology. In 2020, the Secretariat conducted an assessment and determined that Romania does not meet the requirements under Paragraph 9b of the Eligibility Policy. Therefore, Romania was determined not to be eligible for an HIV allocation for the 2020-2022 allocation period.
- ^h Since the Russian Federation is not on the OECD DAC list of ODA recipients, the Russian Federation may be eligible for an allocation for HIV for non-governmental or civil society organizations under Paragraph 9b of the Eligibility Policy only if they have demonstrated barriers to providing funding for interventions for key populations, as supported by the country's epidemiology. In 2020, the Secretariat conducted an assessment and determined that the Russian Federation meets the requirements under Paragraph 9b of the Eligibility Policy. Therefore, the Russian Federation was determined to be eligible for an allocation for the 2020-2022 allocation period.
- ¹ Venezuela's HIV disease burden classification changed from "Not High" in 2020 to "High" in the 2021 Eligibility List, resulting in one determination of eligibility. Country components must be eligible for two consecutive eligibility determinations to be classified as eligible on the Eligibility List.
- ^j The Global Fund Eligibility Policy (GF/B39/02) provides that certain non-eligible countries may be recommended to be eligible for malaria in the event of a significant resurgence in malaria cases. Venezuela was determined exceptionally eligible for malaria for the 2020-2022 allocation period, based on recommendations from technical partners and the Secretariat (GF/B41/EDPo6).

Notes on Methodology

Income classification: The Global Fund's income level eligibility is based on the World Bank's income classifications: low income countries (LIs), lower-middle income countries (LMIs), and upper-middle income countries (UMIs). As per the Eligibility Policy, the Global Fund uses the latest three-year average of GNI per-capita data (Atlas Method) to determine income classification, based on the latest World Bank classification thresholds (updated in July 2020). In case of non-availability of World Bank GNI-per-capita data for one or more years, an average of the available data from the latest three-year period (e.g. two years) is used. In the absence of any GNI-per-capita data for the latest three-year period, the World Bank income classifications for last three years, if consistent, is used to determine income classifications. The Global Fund classification further divides LMIs into two groups, lower-LMIs and upper-LMIs, at the midpoint of the GNI per-capita range of the World Bank's LMI category. This division of LMIs does not affect eligibility but is relevant to the Global Fund co-financing requirements set forth in the Sustainability, Transition and Co-financing Policy (Annex 1 to GF/B35/04 -- Revision 1).

Disease burden: Disease burden data are provided to the Global Fund Secretariat by WHO and UNAIDS. All low and lower-middle income countries are eligible for funding, regardless of disease burden. The disease burden classifications used by the Global Fund are 'High' and 'Not High'. Disease burden criteria apply only to UMIs to determine their eligibility:

- UMI members of the Group of 20 countries (G-20 members) that were deemed ineligible prior to the approval of the Eligibility Policy (GF/B39/02 9 May 2018) are not eligible to receive an allocation, unless they meet criteria under Paragraph 9b of the Eligibility Policy.
- UMIs that are designated under the 'small island economy exception' to the International Development Association lending requirements are eligible for funding regardless of national disease burden.
- For HIV, UMIs must be listed on the OECD's DAC list of ODA recipients to be eligible to receive an allocation and apply for funding, unless they meet the criteria under 9b of the Eligibility Policy.
- UMI Exception to the OECD DAC Requirement for HIV: UMI countries that are not on the OECD DAC List of ODA recipients that have a 'high' burden of disease may be eligible for an allocation for HIV to directly finance non-governmental and civil society organizations, if there are demonstrated barriers to providing funding for interventions for key populations, as supported by a countries epidemiology. Barriers are assessed by the Secretariat every three-years in line with the allocation period.

Malaria-free exception:

- The Global Fund uses malaria data from earlier years (2000), as recommended by WHO, to determine eligibility. Each year WHO provides revised 2000 estimates, which may result in a change of disease burden classification for some countries; and
- Countries, regardless of income-level, that are certified as 'malaria-free' by WHO and are included in the official register of areas where malaria elimination has been achieved, or are on the WHO 'Supplementary List' of countries that are malaria-free but not certified by WHO, are not eligible for an allocation, however they may be eligible for Transition Funding in line with paragraph 18 of the Eligibility Policy.

Transition funding: Components with an existing grant that become ineligible may receive funding for up to one allocation period following their change in eligibility in line with Paragraph 18 of the Eligibility Policy to support priority transition needs. The Secretariat, based on country context and existing portfolio considerations, will determine the appropriate period and amount of funding.

• Transition (year): (Year) represents the year corresponding to the eligibility determination in which the component became ineligible.
