

Eligibility List 2026

Date Published: 8 January 2026

The Global Fund's allocation-based approach enables strategic investment to accelerate the end of HIV/AIDS, tuberculosis and malaria and build resilient and sustainable systems for health. Allocations are made once every three years following the outcomes of the Global Fund's replenishment. Eligibility does not guarantee an allocation.

The Global Fund 2026 Eligibility List (below) identifies which country components (HIV/AIDS, tuberculosis or malaria) are eligible to receive an allocation for the 2026-2028 allocation period (Grant Cycle 8 (GC8)). If a country has no eligible components, it does not appear on the list. For a number of lower burden, higher income country components GC8 will be the final country allocation. This is in line with the revised Sustainability, Transition and Co-financing (STC) policy, which allows the Secretariat to define accelerated transition timelines for country allocations in specific lower disease burden 'middle' income countries (MIC). Setting predictable timelines for transition supports advanced planning, enables the Global Fund to work with countries to properly shape investments to support full transition away from external financing, and enables resources to be utilized in lower income parts of the portfolio.

The Global Fund's Eligibility Policy¹ is designed to ensure that available resources are allocated to, and invested in, countries and regions with the highest disease burden, the least economic capacity, and where key and vulnerable populations are disproportionately affected by the three diseases. Eligibility is determined by a country's income classification² and disease burden³. All low and lower-middle income countries are eligible, regardless of disease burden, unless malaria-free. Upper-middle income countries must have at least a 'high' burden of disease⁴ to be eligible for Global Fund financing⁵. Country components that have received Transition Funding or have voluntarily transitioned from Global Fund financing are not eligible to receive an allocation⁶.

A multi-country application is only eligible for funding where the majority (at least 51 percent) of countries included in the application would be eligible⁷ to submit their own request for funding for that same disease through a single-country application.

Please refer to the notes that follow the list for additional information on specific country components.

Please direct questions about the list to: accesstofunding@theglobalfund.org.

¹ Global Fund Eligibility Policy, as set forth in Annex 1 to GF/B52/08D (the 'Revised Eligibility Policy') and approved by the Board in November 2024 under decision point GF/B52/DP03.

² The Global Fund uses an average of available GNI per capita data (World Bank Atlas Method) over the latest three-year period to determine a country's income classification. Please see Notes for more information on how averages are calculated. Data for this Eligibility List were extracted from the World Bank and the UN (where necessary) websites on 20 November 2025.

³ The latest available disease burden data is provided by headquarters of UNAIDS for HIV and WHO for tuberculosis and malaria.

⁴ Paragraph 8a of the Eligibility Policy defines the disease burden criteria and thresholds for upper-middle income eligibility.

⁵ Exceptions apply. See paragraphs 8b, 9a and 9b of the Eligibility Policy for more information.

⁶ Country components that received Transition Funding in previous cycles but became re-eligible in a subsequent cycle and are currently receiving an allocation do not become ineligible because of this provision.

⁷ For the purposes of determining whether a multi-country applicant meets the 51 percent criteria, country components that voluntarily transitioned, or have or are receiving Transition Funding will be considered as 'eligible', unless they are classified as 'High Income'.

Eligibility List 2026

Notes to changes in eligibility status

^a Algeria's HIV component is no longer eligible for an allocation as the country's disease burden changed to "Not High" in the 2025 Eligibility List. Algeria HIV is eligible to receive a final allocation of Transition Funding in the 2026-2028 allocation period (GC8). Although Algeria's HIV disease burden classification changed from "Not High" to "High" in the 2026 Eligibility List, resulting in one determination of eligibility, Algeria will no longer be eligible for HIV as components that receive Transition Funding become ineligible.

^b Algeria's TB disease burden classification changed from "Not High" in 2025 to "High" in the 2026 Eligibility List, resulting in one determination of eligibility. Country components must be eligible for two consecutive eligibility determinations to be classified as eligible for an allocation under the Eligibility Policy.

^c This component received Transition Funding in the 2020-2022 (GC6) and 2023-2025 (GC7) allocation periods. As per the Eligibility Policy, country components that have received Transition Funding or have voluntarily transitioned from the Global Fund are not eligible to receive an allocation in future grant cycles.

^d This component received Transition Funding in the 2017-2019 allocation period (GC5). As per the Eligibility Policy, country components that have received Transition Funding or have voluntarily transitioned from the Global Fund are not eligible to receive an allocation in future grant cycles.

^e Bhutan's malaria component is no longer eligible for an allocation as the country has been designated as malaria-free by the WHO. Bhutan malaria is eligible to receive a final allocation of Transition Funding in the 2026-2028 allocation period (GC8).

^f This component received Transition Funding in the 2023-2025 allocation period (GC7). As per the Eligibility Policy, country components that have received Transition Funding or have voluntarily transitioned from the Global Fund are not eligible to receive an allocation in future grant cycles.

^g Cabo Verde's TB component is no longer eligible for an allocation as the country's income classification changed from "lower-middle income" to "upper-middle income" with a "Not High" disease burden in the 2026 Eligibility List. Cabo Verde TB is eligible to receive Transition Funding in the 2026-2028 allocation period (GC8).

^h Colombia's TB component is now classified as eligible in the 2026 Eligibility List and is therefore eligible for an allocation under the Eligibility Policy after meeting eligibility criteria for two consecutive eligibility determinations, noting that eligibility does not guarantee an allocation.

ⁱ Costa Rica voluntarily elected not to access its GC7 HIV allocation. In addition, Costa Rica is now classified as a high-income country based on the latest three-year average of GNI per capita data (Atlas method). As a result, Costa Rica is no longer eligible for an allocation in future grant cycles.

^j Ecuador's TB component is now classified as eligible in the 2026 Eligibility List and is therefore eligible for an allocation under the Eligibility Policy after meeting eligibility criteria for two consecutive eligibility determinations, noting that eligibility does not guarantee an allocation.

^k Guatemala's HIV component is no longer eligible for an allocation as the country's disease burden changed from "High" in the 2025 Eligibility List to "Not High" in the 2026 Eligibility List. Guatemala HIV is eligible to receive a final allocation of Transition Funding in the 2026-2028 allocation period (GC8).

^l Indonesia's malaria component became ineligible in the 2025 Eligibility List owing to the country's income classification change from "upper-lower-middle income" to "upper-middle income" with a "Not High" disease burden. Indonesia malaria is eligible to receive a final allocation of Transition Funding in the 2026-2028 allocation period (GC8).

^m As Iraq is classified by the Global Fund as a Challenging Operating Environment (COE) and its TB component is part of an existing multicountry grant, this component is eligible under paragraph 10 of the Eligibility Policy, noting that eligibility does not guarantee an allocation.

ⁿ Lebanon's income classification changed from "upper-middle income" in 2025 to "upper- lower-middle income" in the 2026 Eligibility List, resulting in one determination of eligibility for the TB component. Country components must be eligible for two consecutive eligibility determinations to be classified as eligible for an allocation under the Eligibility Policy.

^o Malaysia HIV has voluntarily transitioned from Global Fund funding (GF/B52/ER11). As per the Eligibility Policy, country components that have received Transition Funding or have voluntarily transitioned from the Global Fund are not eligible to receive an allocation in future grant cycles.

^p Russian Federation is now classified as a high-income country based on the latest three-year average of GNI per capita data (Atlas method). As a result, Russian Federation is no longer eligible for an allocation under paragraph 9B of the Eligibility Policy. Country components with existing grants that move to High Income are not eligible for Transition Funding in line with Paragraph 19 of the Eligibility Policy.

^q Suriname's malaria component is no longer eligible for an allocation as the country has been certified as malaria-free by the WHO. Suriname malaria is eligible to receive a final allocation of Transition Funding in the 2026-2028 allocation period (GC8).

^r Timor-Leste's malaria component is no longer eligible for an allocation as the country has been certified as malaria-free by the WHO. Timor-Leste malaria is eligible to receive a final allocation of Transition Funding in the 2026-2028 allocation period (GC8).

^s Venezuela's income level continues to be temporarily unclassified by the World Bank for the current World Bank Fiscal Year (2026) pending the release of revised national account statistics. For the 2026 Eligibility List, the latest income classification, "upper-lower-middle income", has been derived from UN data in line with the Eligibility Policy.

Notes on Methodology

Income classification: The Global Fund's income level eligibility is based on the World Bank's income classifications: low-income countries (LIs), lower-middle income countries (LMIs), and upper-middle income countries (UMIs). As per the Eligibility Policy, the Global Fund uses the latest three-year average of GNI per-capita data (Atlas Method) to determine income classification, based on the latest World Bank classification thresholds (updated every July). In case of non-availability of World Bank GNI-per-capita data for one or more years, an average of the available data from the latest three-year period (e.g., two years) is used. In the absence of any GNI-per-capita data for the latest three-year period, the World Bank income classifications for last three years, if consistent, is used to determine income classifications. In the event of a change in income classifications and non-availability of World Bank GNI-per-capita data, United Nations (UN) estimates of GNI per capita will be used to determine income classification. In the event the World Bank has not classified a country in the latest three-year period, UN estimates of GNI per capita will be used to determine income classification. The Global Fund classification further divides LMIs into two groups, lower-LMIs and upper-LMIs, at the midpoint of the GNI per-capita range of the World Bank's LMI category. This division of LMIs does not affect eligibility but is relevant to the Global Fund co-financing requirements set forth in the Sustainability, Transition and Co-financing Policy⁸.

Disease burden: Disease burden data are provided to the Global Fund Secretariat by WHO and UNAIDS. All low and lower-middle income countries are eligible for funding, regardless of disease burden. The disease burden classifications used by the Global Fund are 'High' and 'Not High'. Disease burden criteria apply only to UMIs to determine their eligibility:

- UMI members of the Group of 20 countries (G-20 members) that were deemed ineligible prior to the approval of the Eligibility Policy of 9 May 2018 are not eligible to receive an allocation, unless they meet criteria under Paragraph 9b of the Eligibility Policy⁹.
- UMIs that are classified by the International Development Association (IDA) as IDA-eligible Small States, including Small Island Economies, are eligible for an allocation regardless of national disease burden.
- For HIV, UMIs must be listed on the OECD's DAC list of ODA recipients to be eligible to receive an allocation and apply for funding, unless they meet the criteria under 9b of the Eligibility Policy.
- UMI Exception to the OECD DAC Requirement for HIV: UMI countries that are not on the OECD DAC List of ODA recipients that have a 'High' burden of disease may be eligible for an allocation for HIV to directly finance non-governmental and civil society organizations, if there are demonstrated barriers to providing funding for interventions for key populations, as supported by a country's epidemiology. Barriers are assessed by the Secretariat every three years in line with the allocation period.
- The Global Fund uses malaria data from earlier years (average of 2000-2004), as recommended by WHO, to determine eligibility. Each year WHO provides revised 2000-2004 estimates, which may result in a change of disease burden classification for some countries.

Malaria-free exception: Countries, regardless of income-level, that are certified as 'malaria-free' by WHO and are included in the official register of areas where malaria elimination has been achieved or are on the WHO 'Supplementary List' of countries that are malaria-free but not certified by WHO, are not eligible for an allocation, however they may be eligible for a final allocation of Transition Funding in line with paragraph 18 of the Eligibility Policy.

Transition funding: Components with an existing grant that become ineligible may receive a final allocation of Transition Funding for up to one allocation period following their change in eligibility in line with Paragraph 18 of the Eligibility Policy to support priority transition needs. Country components that become ineligible due to moving to High Income or becoming a member of the OECD-DAC are not eligible for Transition Funding. The Secretariat, based on country context and existing portfolio considerations, will determine the appropriate period and amount of funding.

Transition (year): (Year) represents the year corresponding to the eligibility determination in which the component became ineligible if within the last three years.
